

Project Ajasakha - Farmers outreach Project

Date	2026-07-11	Day	N/A
Village	Unknown	Name of the Sarpanch	Ram Singh
Panchayat	Gagg	Phone Number	98723182231
Block	Unknown	Event Location	Home
District	Unknown	No of Farmers attended	3
Name of the Coordinator	Manual Upload	Female Farmers	0
Name of the Reporting Manager		Male Farmers	13
Event Start Time	10:30 AM	Event End Time	12:00 PM

Detailed Narration of the Interaction:

Translation / Dictation:

On July 3, 2026, coordinator Harjo Singh conducted a meeting in Village Gagg, Block Anandpur Sahib, District Rupnagar, with 13 male farmers in attendance. The session, overseen by reporting manager Mrs. Namisha Mahajan and facilitated by Sarpanch Ram Singh, focused on introducing a new agricultural mobile application designed to address local farming challenges. During the discussion, it was revealed that the farmers, who primarily cultivate wheat, paddy, and maize, lack awareness regarding formal agricultural resources such as the Farmer Call Center, government agricultural offices, and crop insurance. Most farmers rely on local seed store vendors for guidance on seeds, pesticides, and herbicides, and they generally do not perform soil testing, as they are satisfied with their current yields. The farmers expressed significant challenges, including a lack of access to subsidized fertilizers and machinery due to the local society operating at a loss. Furthermore, they noted that the younger generation is largely disengaged from agriculture, viewing it as a secondary occupation, and that organic farming is avoided due to high labor costs and perceived low yields. The coordinator documented various crop-specific diseases, such as leaf folder and stem borer in paddy, yellow rust in wheat, and aphids in mustard. Following a demonstration of the proposed mobile application, the farmers provided feedback requesting that the app include real-time notifications regarding local disease outbreaks, along with immediate, actionable solutions to manage these threats effectively.

Summary:

Coordinator Harjo Singh met with 13 farmers in Village Gagg to introduce a new agricultural support app. The session highlighted a reliance on local vendors over official agricultural channels, a lack of awareness regarding government resources, and challenges with fertilizer access and crop diseases. The farmers expressed interest in the app, specifically requesting features that provide real-time alerts and solutions for local pest and disease outbreaks.

Key Challenges Shared by the farmers

1. Lack of awareness regarding soil testing and its perceived lack of necessity.
2. Over-reliance on local seed store sellers for advice on seeds, pesticides, and herbicides.
3. Lack of information regarding government Agriculture Centers and Farmer Call Centers.
4. Unreliability of weather information provided via mobile phones/Google.
5. Lack of awareness regarding crop insurance.
6. Inaccessibility of farmer fairs due to long distances and lack of information.
7. Shortage of fertilizers and lack of subsidized inputs or machinery due to the local society being in financial loss.
8. Declining interest in farming among the younger generation.
9. Farming is treated as a secondary occupation, with a demographic dominated by elderly farmers.
10. Challenges with organic farming, specifically low yields and high labor costs.
11. Soil quality issues (presence of stones) hindering the growth of certain crops like poplar.
12. Prevalence of various crop diseases and pests, including:

Questions asked by farmers

1. Could the application provide real-time notifications regarding disease outbreaks in the local area?
2. Could the application provide specific recommendations and treatment solutions for crop diseases via notifications?

Participants Details
